

Hi Team, (please ignore)

I'm testing redactions for Ticket: [REDACTED]-903080##, where the redaction shifted...actually more of the text shifting.

This is a sample:

- 43 [REDACTED] or more, not less. The latest dat file only contains 36,356 files, so we are 7k short. The 43,444 are from Sightline so they are all unique and already exported. Please see the attached file. I will be redacting all CH in the text.
 - C [REDACTED] n you see the CH
 - CH [REDACTED] n you see the CH
 - CH Can you see the CH
- I worked with CH – Can you see the CH Development and again we briefly stopped the BGP Servers (03-06), which populated the MS-Queue the Indexing in your Project, removed/purged those messages, and restarted the BGP Servers. This processed allowed your currently ingestion to truly complete. I also started the Analysis on the remaining ingestion, which completed and is published. The cause is due to a racing condition in Sightline. Multiple threads picked up your Job and blocked each other from completing, which spawned up additional Jobs. Development identified the issue and will look to address it in Sightline 6.2 release. In the meantime, please continue to create tickets for this type of issue and we'll address them.
- RMX.BackgroundServices.ContentIndexingTasks.ContentIndexingProcessor :: CH can you see the CH Error while calling Web API method. Status : Conflict. Message : CONFLICT Duplicate background job (store: 'mp_fc2ec4ff-6653-474f-9a21-06e151e17e8b', doc_id: 'MasterCluster-fc2ec4ff-6653-474f-9a21-06e151e17e8b', doc_version: '379').
